

Subject ViewController	Questions ViewController's life cycle	Answer init -> viewDidLoad -> viewWillAppear -> viewDidAppear -> viewWillDisappear -> viewDidDisappear
General Central Dispatch	What is the difference between synchronous and asynchronous ?	Asynchronous means , you can execute multiple things at a time and you don't have to finish executing the current thing in order to move on to next one. Synchronous basically means that you can only execute one thing at a time.
UICollectionView	UITableView is great choices for showing cell in a grid	FALSE
UITableView	What are referenced for dequeued reusable cell? When dequeuing a custom collection view cell, why we need to typecast it to our specific type? Which syntax we can use to force a UICollectionView/UITableView to reload all data?	UICollectionView: section and item, UITableView: section and row UIKit gives us back a general UICollectionViewCell, but we know it's actually our custom type so we need to use as or as? to convert it. .reloadData()
URLSession	What is API? OR Have you used URLSession class? What does it do?  What are types of HTTP status code?	API is the acronym for Application Programming Interface, which is a software intermediary that allows two applications to talk to each other. The URLSession class and related classes provide an API for downloading data from and uploading data to endpoints indicated by URLs. Your app can also use this API to perform background downloads when your app isn't running or, in iOS, while your app is suspended. 1xx (100 – 199): Information responses 2xx (200 – 299): Successful responses 3xx (300 – 399): Redirects / Điều hướng 4xx (400 – 499): Client errors 5xx (500 – 599): Server errors
	List all types of session task	URLSessionDataTask, URLSessionUploadTask, URLSessionDownloadTask
